

# TREES FOR TIGERS

**By contributing ₹50 for a sapling you can help in restoring a degraded forest into a vibrant habitat for wildlife!**

The Junglescapes' reforestation project helps restore degraded reserve forests near Bandipur, thus creating good buffer habitats for wildlife including tigers. This activity is carried out with the involvement of local forest dwelling communities who get an alternate livelihood based on conservation. In turn this gives them an incentive to take care of the forests. Over the last 4 years over 500 acres of forests have been restored and the wildlife is now returning to these habitats! We genuinely appreciate your support for this program.
